

CHS, at a glance.

Full logo: formal identity

Monogram: compact uses

Typography

Cal Sans: headings

DM Sans: body, labels and documents

Use the supplied artwork.

- Keep shape and proportions intact; do not retype the logo.
- Light surface: original colour. Dark surface: supplied white variant.
- Proposed clear space: 20% of the artwork height on each side.
- Proof the smallest size on the real print or stitched sample.

Before an item is made.

1 Use the real source files

SVG for suppliers and large print. PNG where required. Generated images are concept visuals, not production logo artwork.

2 Proof material and colour

Review vinyl, thread, paper, plastic and paint samples. Digital hex values do not define an exact physical colour match.

3 Preserve working information

Cloth colours follow the approved site procedure. Bottle labels use real contents and instructions. Safety signs retain their warning hierarchy.

4 Confirm item specifications

Vehicle model, garment cut, label dimensions, chemical information, site languages and equipment ownership are confirmed before artwork.

5 Approve a physical sample

Check readability, clear space, seam and handle clearance, adhesion, laundering or wiping, as appropriate to the item.

6 Keep the final record

Archive the approved proof, native artwork, supplier, product specification and version. Keep the original logo master separate.

Full guideline: application examples, placement proposals and source links.
